Session title	Introduction to Flowcharts		**Date**	_____	**Location**	ICT Lab 208	
Learner group	Grade 7A	**Duration**	40 minutes		**Group size**		_____

Learning aims A statement which provides the scope of the subject and the overall intent of the course.	**Learning Aim (According to Bloom's Taxonomy):** To recognize common flowchart symbols and create a logical flowchart for an everyday algorithm. Reference: Cambridge Lower Secondary Computing; teacher-prepared flowchart examples. Teacher: Zubair Maqsood.

Learning objectives What are learners expected to learn after completing the lesson? These should be specific and able to be assessed.	**Student Learning Outcomes (SLOs) - According to Bloom's Taxonomy** By the end of the lesson, students will be able to: 1. Identify four common flowchart symbols and their functions. (Remember) 2. Explain the role of flow arrows, processes and decisions. (Understand) 3. Construct a correct flowchart for a simple problem. (Apply)

Inclusion **How will you make your lesson inclusive?**	I will use clear examples, a symbol guide, pair discussion and live demonstration. Differentiation: Support - symbol guide and partially completed chart; Core - independent chart; Advanced - create a decision-based chart with two outcomes and justify the logic.

Time	What are you doing?	What are your students doing?	Learning materials and resources
2 min	I will take attendance, display the topic and explain the three SLOs.	Students prepare materials and read the lesson objectives.	Smart Board; notebooks; flowchart slides.
3 min	Previous Learning / Engage: I will ask students to describe steps for making tea.	Students recall everyday sequences and share their ideas.	Smart Board; discussion prompts.
5 min	Explore: I will show a simple flowchart and ask pairs to recognize its symbols.	Students compare symbols, arrows and the order of steps.	Sample flowchart; symbol cards.
10 min	Explain: I will demonstrate Start/End, Input/Output, Process, Decision and arrows, with examples.	Students label symbols, describe their uses and trace a flowchart.	Smart Board; symbol guide; Cambridge Learner Book 6.

Time	What are you doing?	What are your students doing?	Learning materials and resources
6 min	Elaborate - Practical Task 1: I will guide learners to draw a flowchart for adding two numbers. I will model the correct symbol sequence: Start -> Input A, B -> Add -> Output -> End.	Students draw the flowchart in pairs, check symbols and explain the sequence.	Symbol guide; notebooks; Smart Board; worksheet.
9 min	Practical / Lab Activity - Task 2: I will model a decision chart: input a number; if it is greater than or equal to zero, display Non-negative; otherwise display Negative.	Students create their own decision flowcharts, label Yes/No branches, and check the logic with examples.	Computers or paper; flowchart tool; printed task sheet.
4 min	Evaluate / Formative Assessment: I will ask students to identify a decision symbol, explain arrows and show a completed flowchart. I will check achievement against the three SLOs.	Students answer independently, share their charts and correct any symbol or logic errors.	Exit ticket; Smart Board; student flowcharts.
1 min	I will recap the main symbols. Homework: draw a flowchart to decide whether a student passed a test (mark 50 or above).	Students share one learning point and record the homework task.	Homework sheet; notebooks.

Lesson Evaluation:

What went well: _____ Evidence of SLO achievement: _____

What I would improve next time: _____ Learners requiring follow-up support: _____
